G2 CANAL

G-2/G-11 CANAL IMPROVEMENTS

The G-2/G-11 Gabordy Canal Improvements represent one of Edgewater's largest and most significant infrastructure investments, funded through a \$14.7 million CDBG-Mitigation Grant from Florida Commerce. This project is designed to protect neighborhoods from severe flooding by preventing storm surges from entering the canals from the Indian River Lagoon.

Key improvements include new stormwater pump stations to reduce flooding between US-1 and the railroad tracks and construction of additional stormwater ponds. These efforts will greatly enhance flood protection and resilience for our community. Engineering design plans are currently underway, marking the first step toward a safer and more sustainable stormwater system for Edgewater.
