Modular Training Table 3.0 is primarily composed of construction grade framing materials. This allows our tables to be sturdy and durable, but also light weight. These materials are used for the table frame, support frame, side frames and legs.

The tabletop is a 3/8" thick HDPE material [high density polyethylene] This is an incredible material with exceptional durability to ensure the longest service life for your Modular Training Table. This material can withstand the abuse from repeated training sessions without being damaged or deteriorating. It is also incredibly easy to clean and maintain.

The arch is made of a 1" metallic tube to ensure that your K9 is adequately and safely restrained for training sessions.
